

Carmichael Engineering

Combustion Mechanic – Mississauga, Belleville, Quebec City

Job description

With us, it's always about people

Innovation, excellence, integrity and determination are just some of the core values on which Carmichael is founded. These enduring values serve as guiding principles that have allowed us to thrive as a service provider of HVAC thermal systems for 100 years.

Being part of the Carmichael family translates into endless opportunities to learn and achieve tremendous personal growth. And what's more, we give you carte blanche to apply what you learn so that you can in turn perfect and continuously improve it.

Carmichael is a place where your experience will be valued and respected. If you've ever tasted success and are hungry for more, Carmichael is the perfect place to satisfy your appetite for success.

Responsibilities:

- System diagnostics, troubleshooting and problem resolution.
- Test combustion equipment and controls for issues
- Dismantle malfunctioning systems and test components using electrical and mechanical testing equipment
- Replace defective parts and reassemble repaired systems
- Observe and test system operation using gauges and test instruments and make necessary adjustments to ensure safe and reliable system operations
- Estimate, order and install materials and supplies needed to maintain equipment in good working condition
- Keep accurate records of repairs and replacements made and cause of malfunctions

Requirements:

- G1 Gas Technician license with 5 years of experience
- Steam and hot water boiler experience
- Valid driver's license with clean driving record
- Strong communication and interpersonal skills
- HVAC qualifications considered an asset

Client focus; dependable; reliable; flexible.
